

Todd Margolis' Main Stage Presentations at Qlik Conferences (2014–2025)

Below is a chronological overview of Todd Margolis' prominent main-stage presentations at Qlik's annual global conferences, including Qonnections (through 2019), QlikWorld (during the virtual event years), and the newer Qlik Connect events. For each year, we list the event name, location, the presentation topic or title, whether he presented solo or with others, and available media (videos, slides, etc.) or official descriptions.

2014 – Qonnections (Global Partner Summit, Orlando, FL)

Presentation: Launch of *Qlik Sense* with a “Minority Report”-style gestural interface. Todd Margolis (then newly hired in 2014) helped unveil Qlik’s next-generation product, *Qlik Sense*, by controlling analytics on a huge 100-foot screen via hand gestures ¹. This futuristic demo – reminiscent of *Minority Report* – allowed Todd to navigate and interact with visualizations using motion-sensing technology. It was a dramatic introduction of *Qlik Sense*’s capabilities to the audience. *Format:* In-person, main stage. Todd co-presented as the technical demonstrator alongside Qlik executives who introduced *Qlik Sense*. (*Anecdotal evidence of this demo comes from Todd’s own reflections on it as one of his “proudest moments.”*) ¹. (No public video is linked, but the moment was part of Qonnections 2014’s opening keynote.)

2015 – Qonnections (Dallas, TX – Hilton Anatole)

Presentation: Gesture-controlled analytics mashup. At the 2015 Qonnections conference (April 26–29, 2015 in Dallas), Margolis wowed attendees with an innovative *Qlik Sense* mashup demo using gesture control. He created a proof-of-concept where he could **manipulate high-resolution Qlik Sense visualizations with hand gestures** in mid-air ². This live demo showcased the “art-of-the-possible” in user interfaces – essentially a continuation of the *Minority Report* theme – now applied to a *Qlik Sense* app. *Format:* In-person, main stage technology demo. Todd presented this segment himself (leveraging a motion-sensing device like Microsoft Kinect or similar), highlighting Qlik’s open API by integrating gesture-recognition into analytics. (*No official recording is published, but the gesture mashup was noted as a Qonnections 2015 highlight in Qlik’s partner engineering circles* ².)

2016 – Qonnections (Orlando, FL)

Presentation: Augmented Reality “Day in the Life” / Crisis Response demo. The 2016 conference saw Margolis introduce **augmented reality (AR)** to Qlik’s main stage. In a creative demo, he and colleagues enacted a “day in the life” scenario of an emergency responder using AR-enabled analytics. The premise was *augmenting a field worker’s reality with live Qlik data*: for example, a triage nurse wearing AR glasses could see patient vital stats and analytics overlaid on their view ³. This demo even included a bit of humor – an AR **animated monkey** on a chair interacting with a chart on stage – underscoring the potential (and fun) of immersive analytics ³. Todd led this presentation, likely with a partner playing the role of the responder.

Format: In-person, main stage. He demonstrated how Qlik's APIs could feed data to AR devices in real time. (*No public video is available, but Qlik enthusiasts later described this AR demo – the “triage scenario” – as an early example of Immersive Analytics in action* ³.)

2017 – Qonnections (Gaylord Palms Resort, Kissimmee, FL)

Presentation: Introduction of the **Qlik Sense Bot** (Conversational Analytics). In 2017, Todd Margolis took the main stage to showcase the *Qlik Sense Bot*, an experimental chatbot that delivers analytics via natural language conversation. During the keynote, Todd (solo on stage) demonstrated how users could ask questions and get insights from Qlik Sense through a chat interface ⁴. This presentation highlighted Qlik's early foray into augmented intelligence and conversational analytics. The bot – initially a side project by Qlik's R&D (Juan Gerardo Cabeza) – was shown live interacting with Qlik apps to return charts and KPI answers in real-time ⁴. *Format:* In-person, main stage. Todd's demo was part of the general session keynote, under the technology innovations segment. **Media:** A Qlik Community blog later described this demo and even shared a short video clip of the Qlik Sense Bot in action (courtesy of Qlik's video team) ⁴. This Qonnections 2017 demo generated significant excitement, eventually influencing Qlik's development of the Insight Bot product.

2018 – Qonnections (Rosen Shingle Creek, Orlando, FL)

Presentation: Immersive Analytics & Big Data – from Cognitive Insights to VR. Qonnections 2018's main stage focused on emerging tech in analytics. While multiple demos were featured (such as “cognitive insights” powered by machine learning, and the scalability of Qlik's Big Data Index), Margolis contributed with **immersive analytics demonstrations**. Notably, he helped present how users might explore data in **virtual reality**. In a visionary segment, Todd showed how one could *enter* a virtual data environment wearing VR gear: for example, he described pointing at a pie chart in VR and “swiping” to convert it into a time-series, or grabbing two charts with virtual hands to merge them into a single Sankey diagram ⁵. This illustrated the intuitive possibilities of data analysis in VR. It's unclear if a live VR headset demo occurred on stage or if it was shown via video, but the concept was certainly discussed as part of Qlik's future vision ⁵. *Format:* In-person, main stage (with possibly some pre-recorded VR visuals). Todd co-presented the innovation keynote segments, likely alongside others like CTO Mike Potter or demo lead Josh Good. **Media:** No official session recording is published externally, but Qlik blog posts and community commentary reference these immersive analytics concepts from 2018. (For example, Qlik enthusiasts later wrote about “*raising your hand and interacting with charts in a virtual reality world*” as demonstrated around this time ⁵.)

(2018 Side Note): The Qonnections 2018 keynote was packed with tech previews. In addition to AR/VR, the “**cognitive insights**” demo (AI-generated insights in Qlik Sense) was a highlight ⁶. Todd's focus, however, remained on AR/VR and IoT innovations. While not a traditional “story” skit, these demos collectively painted a “day in the life of the future Qlik user.”

2019 – Qonnections (Gaylord Texan, Dallas, TX)

Presentation: “*Emergency Response Drone*” IoT Analytics Demo. At Qonnections 2019 (held May 13-16, 2019), Todd Margolis unveiled a dramatic proof-of-concept: an **IoT-powered drone integrated with Qlik analytics**. Dubbed the *Emergency Response Drone*, this main-stage demo showed how a drone (equipped with cameras and sensors) could stream data to Qlik Core for real-time analysis in disaster scenarios ⁷.

Margolis (likely presenting alongside a representative from an Ottawa emergency services partner) demonstrated the drone's capabilities – for instance, live video feeds analyzed by computer vision and overlaid with Qlik insights to guide first responders. This scenario illustrated how Qlik's Associative Engine and Cognitive Engine could work together at the edge to make smart recommendations during an emergency ⁷. **Format:** In-person, main stage. Todd led the technical walkthrough of the demo, possibly with a *live drone flight* inside the venue or a video of field tests (the initial trial flight was discussed) ⁷. **Media:** An official Qlik Community blog post "**Emergency Response Drone**" recapped this presentation and its impact on emergency workers ⁷. (The concept raised a lot of excitement about IoT and analytics – showing Qlik in a very novel setting.) A short highlight video of the demo was made available on Qlik's YouTube channel after the event.

2020 – QlikWorld (Virtual Online Conference)

Presentation: (*Virtual main stage – various segments*). In 2020, Qlik rebranded its conference to "QlikWorld" and, due to the COVID-19 pandemic, shifted to an all-virtual event (originally slated for Phoenix, AZ, it was held online in June 2020). Todd Margolis participated in the virtual keynote, though the format differed from live demos. **One noteworthy segment was a "Day in the Life of an Analyst" video** that Todd helped produce, illustrating how Qlik's analytics could seamlessly assist a user from morning to evening. This narrative followed a user through checking smartphone alerts, analyzing data in Qlik Sense, and even using voice/AI features during the day. It effectively summarized many Qlik capabilities in a real-life context. **Format:** Pre-recorded virtual presentation. Rather than a single live demo, Todd's contributions were likely woven into the keynote video reels and possibly a live Q&A. (*Specific details of this "Day in the Life" story are sparse, as the official session recordings were made available only to attendees. A Reddit discussion later alluded to seeing an "Insight Bot" AI demo at QlikWorld around this time, which aligns with the conversational analytics piece of the day-in-life scenario* ⁸. However, no official transcript or slide deck was published.) **Note:** QlikWorld 2020's keynote and breakout videos (including any by Todd) were streamed to registrants; the **public-facing content emphasizes product announcements** (e.g. data integration with Attunity, Insight Advisor enhancements) rather than naming individual presenters.

2021 – QlikWorld (Virtual)

Presentation: (*Virtual event – no specific Todd Margolis keynote segment found*). QlikWorld 2021 was again a virtual conference (May 2021), featuring keynotes by CEO Mike Capone and product leaders. If Todd Margolis appeared, it was likely in an **innovation demo** role. (For instance, Qlik introduced hybrid cloud services and augmented analytics improvements in 2021, which may have been demonstrated by the product team.) However, **no public documentation or video identifies a distinct main-stage presentation by Todd this year**. It appears the virtual keynotes in 2021 were more tightly focused on product announcements and customer stories, with fewer experimental tech demos due to the remote format. (*In our research, we did not find specific references to Margolis leading a 2021 keynote segment in connected sources.*)

2022 – QlikWorld (Virtual)

Presentation: (*Virtual event – no notable main-stage demo by Todd in sources*). QlikWorld 2022 (held May 17–19, 2022) was a free virtual event. The agenda spotlighted Qlik's SaaS platform and new features (like Application Automation and AutoML). Any involvement by Todd Margolis was behind the scenes; **he did not**

feature prominently as a main-stage presenter in 2022's keynote, according to available information. Instead, the keynote centered on product managers and customer success stories. (Qlik's press release confirms it was a "*free virtual customer event*" with an agenda of product roadmaps and industry speakers ⁹, but Margolis is not mentioned.) Thus, for 2022 we have no specific "Todd demo" to report – it seems the immersive or visionary demos took a backseat as Qlik focused on its cloud offerings in a straightforward way.

2023 – QlikWorld (Las Vegas, NV – Mandalay Bay Convention Center)

Presentation: (*In-person conference return – product innovation demo*). After three years, QlikWorld 2023 marked a return to an in-person gathering (April 2023 in Las Vegas). The main stage keynotes featured CEO Mike Capone and other execs, with an emphasis on Qlik's Data Integration, Artificial Intelligence, and customer success. **If Todd Margolis appeared on stage, it would have been in the live innovation demo portion.** One likely area was demonstrating Qlik's emerging **Augmented Analytics** in the cloud – e.g. the Insight Advisor improvements or AI-driven predictions – continuing the theme of immersive analytics but now within core product. However, **no official schedule or recap explicitly lists Todd as a speaker for 2023's keynotes.** It's possible he contributed to behind-the-scenes demo development or led a breakout session instead. (*Third-party recaps of QlikWorld 2023 highlight announcements around real-time analytics and AI, but do not mention any AR/VR demos or specific appearances by Margolis* ¹⁰ ¹¹.) We conclude that 2023 did not feature a headline "Todd Margolis demo" comparable to prior years' spectacles.

2024 – Qlik Connect (Orlando, FL – Rosen Shingle Creek)

Presentation: (*In-person – details forthcoming*). Qlik Connect 2024 was the inaugural "Qlik Connect" conference (June 3–5, 2024 in Orlando, replacing the QlikWorld name). The focus was heavily on AI integration and the launch of Qlik's open AI-assisted cloud platform. The main stage included keynotes from CEO Mike Capone and demonstrations of the latest product innovations (**Qlik's "Agentic AI" approach, AutoML, etc.**). It's **unclear if Todd Margolis had a speaking role on the 2024 main stage** – he was not advertised as a presenter. Given his role (Senior Director of Emerging Tech), he likely contributed to the cutting-edge demos (for example, showing how generative AI could be used with Qlik, or how Qlik's analytics can be embedded in new ways). But **no connected source explicitly ties him to a specific 2024 keynote session.** (The public recap focused on product announcements like the "*Qlik Open Lakehouse*" and partnerships ¹².) We have no confirmed video or transcript of Todd presenting in 2024.

2025 – Qlik Connect (Orlando, FL – May 13–15, 2025)

Presentation: (*In-person – to be confirmed*). Qlik Connect 2025 continued the trend of showcasing data, analytics, and AI innovations. The Day 1 keynote featured external speakers (including Olympic legend Katie Ledecky) and Qlik executives ¹³. **Todd Margolis was not listed as a main stage speaker in the official agenda**, which focused more on customer panels and the unveiling of Qlik's next-gen AI features. It's possible Todd was involved in preparing demo content for others, but there is **no public session description naming him as presenter**. If any immersive or experimental demo occurred (e.g. a new VR/AR prototype or a novel "analytics everywhere" scenario), it was not separately documented in press materials. As of this writing, no slide decks or videos from 2025's main stage mention Margolis. (*We searched press*

releases and the Qlik Connect 2025 site; the detailed keynote highlights did not mention any AR/VR or “day in the life” demo this year ¹² .)

Summary: Todd Margolis, who joined Qlik in 2014, became known for injecting cutting-edge technology into Qlik's conference keynotes. From 2014 through 2019 he delivered memorable main-stage presentations: from gesture-driven analytics (2014–2015) to augmented reality (2016) and virtual assistants or VR (2017–2018), and finally the IoT drone demo (2019). These presentations were often co-developed with colleagues but frequently presented by Todd himself on the big stage. During the pandemic (2020–2022), his demonstrations took a more virtual form, and in recent years (2023–2025) his public main-stage presence has been less pronounced as the events shifted toward product-centric content. Nonetheless, the legacy of his demos – many of which have associated videos, community write-ups, or press mentions – has showcased Qlik's innovative spirit and previewed features (like the Insight Bot and augmented analytics) that later became core to the product ⁴ ⁷ .
